

Rinpoche's Health Update

Date : July 24, 2018

Dear Vajra Family,

I would like to update you briefly about Rinpoche's situation.

As you all know, Rinpoche is being at the clinic in the north of Tenerife since last Friday.

The reason is he was detaining some liquid with his legs, arms and got an infection in his right leg. Now the water is reducing lots and the level of liquids is almost normal, but the problem is the weakness of his kidneys. So his doctor said that in order to improve his kidneys, Rinpoche has to remain more days at the clinic. The doctors and nurses are taking the maximum care of him and also some of us rotate for 24 hr to stay with him.

He has no pain, he is eating and sleeping very well, blood pressure and oxygen level are very normal.

The rest of our Community, Gars and Lings could support him through your practices in groups and individually. We have been doing lots of collective practices for him but still it is very important to do it continually for his recovering.

We will try to update you with the curent situation from time to time.

Many Tashidelegs!!!

Rabgyi
